

Pay-by-card for BigCommerce shops

A plain-language overview of the integration between BigCommerce and WSPay.

What it is. An app that lets online shops running on BigCommerce accept credit-card payments through WSPay (a payment processor common in our region). It sits quietly between the shop and the card processor — the shop owner sets it up once, and from then on it just runs.

Who it's for

- Online shop owners using BigCommerce who want to take card payments through WSPay.
- Their customers, who want to pay by card without leaving the shop (or with a quick trip to a secure payment page).
- The Monri team, who configure each shop and keep the integration healthy.

What a customer sees

1. They fill their cart on the BigCommerce shop and get to the checkout page.
2. Among the payment options, one says "*Pay by card*" (the exact label is set per shop).
3. They pick it. One of two things happens, depending on how the shop is configured:
 - **Embedded mode** — a small card-entry form opens inside the same page. They type their card, pay, and never leave the shop.
 - **Redirect mode** — they click "Pay" and get sent to a WSPay-hosted page to enter their card, then bounced back to the shop's "order confirmed" screen.
4. If they tick "*save my card*", next time they shop on the same store they can pick the saved card from a dropdown and skip re-entering it.
5. If the payment succeeds, the BigCommerce order moves to **Completed**. If it fails, it goes to **Cancelled**. If the shop later refunds or partially refunds, that flows through too.

Who configures what

- A shop owner — or a Monri admin on their behalf — sets up a store record in our admin panel: which BigCommerce shop, which WSPay merchant account, embedded vs redirect mode, what label to show on checkout, where to send the customer after payment.
- Once it's set up, customers never see our app. They only see the BigCommerce shop and (sometimes briefly) a WSPay payment page.

What we don't do

- **We don't take the money.** WSPay handles the actual card processing and bank settlement.
- **We don't store card numbers.** When a customer saves a card, all we keep is a WSPay-issued token that means "this customer's saved card."
- **We don't run the shop.** The product catalogue, shipping, taxes, emails — all of that stays in BigCommerce. We only handle the payment step.

When something goes wrong

- A failed payment becomes a cancelled order in BigCommerce, automatically.
- If WSPay can't reach us with the result, the order stays in its previous state until WSPay retries. We log every call so the team can debug.
- Refunds and voids initiated from our admin tools flow back to BigCommerce so the shop owner's order list stays accurate.

In one sentence: the customer pays on the BigCommerce shop, WSPay processes the card, and our app keeps the two sides in sync.
